Caring for You Safely

At Sharp HealthCare, safety has always been our top priority. This is especially true during the ongoing coronavirus pandemic.

We understand you might be concerned about having a procedure in the hospital and we want to reassure you that it is safe to receive your care at Sharp.

We have extra precautions in place to keep you and our care team safe:

- Patients with fever and respiratory symptoms, or other potential signs of COVID-19, are treated separately from other patients.

- All patients, doctors and staff are screened prior to entering our facilities. All patients having surgery are tested for COVID-19 before coming to the hospital.

- We reduce face-to-face interactions whenever possible.

- Our caregivers always wear medical-grade masks while in the hospital. Patients will be given masks to wear in pre-surgery and surgical recovery areas. Employees may wear additional personal protective equipment in certain situations.

- We are limiting the number of visitors.

- Our facilities and equipment receive regular deep cleaning.

- High-tech disinfecting robots are used to help ensure hospital rooms and surgical areas are thoroughly clean.

We are grateful you entrust your care to us, and we are ready to care for you.
